

Hello,

I'm conventional scripting networker with the past of military officer. I have studied computers as a military specialization C4I. Till 2010 I was in army. Since 2020 I work for ICTO corporations continuously.

The work, which I'm searching for, should cover the four key activities:

- **configuration of network devices**
- **Programming / scripting**
- **Drawing network schemas**
- **Work on site with the technology**

The platforms, I have managed during my life, have been provided by **vendors Cisco, Juniper, F5, Nokia, RedHat, Microsoft, CheckPoint** and may be some others. I'm writing code within usual scripting languages, such as **PERL, Python, PHP, bash** or even JavaScript. I don't hesitate to use applied computer languages such as SQL, VIM, PostScript or HTML. During my free time I'm trying to recover my ability for system programming within languages C/C++/Pascal. It's because of OS API understanding only, but the final result of this activity should be the full recovery of my ability to code in Assembly language for various microprocessors, common within the IoT world. Regarding the drawing of network schemas, I prefer to use Microsoft Visio. I'm using Git every day and DevOps model, based on CI/CD would be a pleasure for me. My work on site covers the driving license **AM,B,B1** and certificate **par 23 of regulation 508/2009 Z.z.** (a head of plant operation with electrical devices up to 1000V of power supply with unlimited number of subordinated persons)

Regarding the **work hours** I'm fine with the flexible time, including night work, work during the weekends and public holidays. Duty is fine for me as well. BUT unfortunately, as described the next, one restriction does exist.

Regarding the **place of the work** I have to say my home-office resides in Poprad, but my regular place of the work is located in Bratislava for more than 10 years already. On daily basis I'm able to work on tasks at locations Bratislava, Banská Bystrica, Zvolen, Martin, Košice, Poprad and their near surrounding places.

Because of family reasons the work trip is **limited up to 84 hours**. It means I should be able to reach distance up to 720km from the Poprad, while I should be able to stay on site with the technology up to 52 hours so the list of reachable countries except the Slovakia extends with the Czech republic, Hungary, Serbia, Croatia, Poland and Austria.

My work restriction contains the care about three invalid family members. This obligation has raised for me after my father's dead the February 2nd 2023. It contains brief health check, administering medication, shopping and the join of their doctor visits. At the first days after the father's dead it was necessary 3 times a day, but now the situation has stabilized and the need of my intervention has reduced to period of each 84 hours mentioned above.

My dream job is an often question. It does exist in reality and I was may be one step away from it already. My dream job is a large **network operation**. It's about the IP networks using MPLS technology and Data Centers, covering may be a region of Slovakia. As mentioned above, the dream job contains the configuration of routers, switches, firewalls. OLTs, DSLAMs, BNGs or network related services such as DNS,AAA,CGNAT, some programing, drawing and work with devices on site. Regarding the radio networks I like the WiFi provided by Orange a.s. for various mass events like Festival Pohoda, or Pope visit in Slovakia. But regarding 3GPP networks I have failed at all for now. They contain a lot of standards. Read and understand them all, it may take some years for me.

If you want to ask more, then do not hesitate to send an e-mail or call my phone number anytime.

With regards

Ondrej
